DrumScribe | quarter = 128 4/4

Diagram of a 4-qubit quantum circuit. The top two qubits are initialized to $|0\rangle$. The bottom two qubits are initialized to $|1\rangle$. The circuit consists of three layers of CNOT gates. Layer 1: CNOTs from qubit 0 to qubit 1, and qubit 2 to qubit 3. Layer 2: CNOTs from qubit 1 to qubit 0, and qubit 3 to qubit 2. Layer 3: CNOTs from qubit 0 to qubit 1, and qubit 2 to qubit 3. The final state is $|0011\rangle$.

The diagram illustrates a sequence of elements arranged in two rows. The top row consists of 16 vertical lines. The first and fourth lines are labeled 'x' at both ends, and the second and third lines are labeled 'x'' at both ends. The bottom row also consists of 16 vertical lines. The first and fourth lines are labeled 'o' at both ends, and the second and third lines are labeled 'o'' at both ends. A horizontal bar connects the two rows, with a '2' written below it.

The diagram illustrates a quantum circuit for a 5-qubit system. The top section shows a sequence of 15 gates, each represented by a vertical line with an 'x' on the control qubit and a vertical line on the target qubit. The gates are arranged in three groups of five. The bottom section shows a 5-qubit register with qubits labeled 0 to 4. Qubit 0 is the leftmost, and qubit 4 is the rightmost. The gates in the top part are connected to the qubits in the bottom part by lines.

DrumScribe | quarter = 128 4/4

The diagram shows a 2D lattice with two rows of sites. The top row has sites labeled with 'x' and '0'. The bottom row has sites labeled with '0'. The lattice is divided into four vertical sections by vertical lines. The first section has 'x' on top and '0' on bottom. The second section has 'x' on top and '0' on bottom. The third section has 'x' on top and '0' on bottom. The fourth section has 'x' on top and '0' on bottom.
